Hello,

Unfortunately we cannot assist you. The spam domains redidatinc.com and redidata.com are registered to your company. There is no way whatsoever for us to determine that those domains and your company are not one and the same without involving Comcast. It is likely that they cannot make that distinction as well.

When you register a domain in your name, you are responsible for it and the activities that it is involved in. Since you are the registered owner of these domains, you need to shut them down or get your name off of them at very least before we would consider removing your SBL listings.

Thanks,

Asya
